

### DESCRIPTION

The GLF7130x is an ultra-efficiency, 2.0 A rated, Load Switch with integrated slew rate control. The best in class efficiency makes it an ideal choice for use in IoT, mobile, and wearable electronics.

The GLF7130x features an ultra-efficient I<sub>Q</sub>Smart™ technology that supports the lowest quiescent current (I<sub>Q</sub>) and shutdown current (I<sub>SD</sub>) in the industry. Low I<sub>Q</sub> and I<sub>SD</sub> solutions help designers to reduce parasitic leakage current, improve system efficiency, and increase battery lifetime.

The GLF7130x integrated slew rate control can also enhance system reliability by mitigating bus voltage swings during switching events. Where uncontrolled switches can generate high inrush currents that result in voltage droop and/or bus reset events, the GLF7130x slew rate control specifically limits inrush current during turn-on to minimize voltage droop.

The GLF7130x Load Switch device supports an industry leading wide input voltage range and helps to improve operating life and system robustness. Furthermore, one device can be used in multiple voltage rail applications which helps to simplify inventory management and reduces operating cost.

The GLF7130x Load Switch device is small utilizing a wafer level chip scale package with 4 bumps in a 0.77 mm x 0.77 mm x 0.46 mm die size and a 0.4 mm bump pitch.

### FEATURES

- Ultra-Low I<sub>Q</sub>:
  - 1 nA Typ at 5.5 V<sub>IN</sub> on GLF71300, GLF71301, GLF71306, GLF71308
  - 540 nA Typ at 5.5 V<sub>IN</sub> on GLF71302, GLF71303
- Ultra-Low I<sub>SD</sub>: 19 nA Typ at 5.5 V<sub>IN</sub>
- Low R<sub>ON</sub> = 34 mΩ Typ. at 5.5 V<sub>IN</sub>
- I<sub>OUT</sub> Max = 2.0 A
- Wide Input Range: 1.1 V to 5.5 V  
6 Vabs max
- Controlled Rise Time:
  - 430 μs at 3.3V<sub>IN</sub>: GLF71300, GLF71301, GLF71302, GLF71303
  - 42 μs at 3.3V<sub>IN</sub>: GLF71306, GLF71308
- Internal EN Pull-Down Resistor on GLF71300, GLF71301, GLF71306, GLF71308
- Internal EN Pull-Up Resistor on GLF71302 and GLF71303
- Integrated Output Discharge Switch: GLF71301, GLF71303, GLF71308
- Ultra-Small: 0.77 mm x 0.77 mm

### APPLICATIONS

- Wearables
- Data Storage, SSD
- Mobile Devices
- Low Power Subsystems

### PACKAGE

0.77 mm x 0.77 mm x 0.46 mm WLCSP

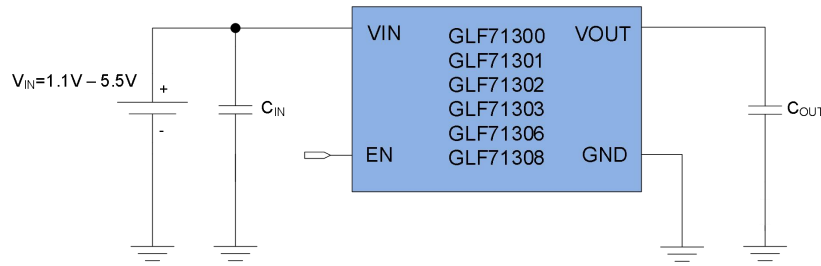

# GLF71300, GLF71301, GLF71302 GLF71303, GLF71306, GLF71308

Nano-Current Consumed, I<sub>Q</sub>Smart™ Power Load Switch with Slew Rate Control

INTEGRATED POWER

## APPLICATION DIAGRAM

## ALTERNATE DEVICE OPTIONS

| Part Number | Top Mark | Vout Rise Time at 3.3Vin (Typ) | RON (Typ) at 5.5 V | Output Discharge | EN Activity | Package                              |
|-------------|----------|--------------------------------|--------------------|------------------|-------------|--------------------------------------|
| GLF71300    | A        | 430 $\mu$ s                    | 34 m $\Omega$      | NA               | High        | 0.77 mm x 0.77 mm<br>x 0.46 mm WLCSP |

## ABSOLUTE MAXIMUM RATINGS

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions; extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

| Symbol                    | Parameter                                                 | Min.                              | Max. | Unit                      |

- Notes:
- $I_Q$  of GLF71300, GLF71301, GLF71306, and GLF71308 does not include the EN pin current through the pull-down resistor  $R_{PD}$ .
  - $I_{EN}$  applies only for GLF71300, GLF71301, GLF71306, and GLF71308 with the active high EN pin.
  - $t_{ON} = t_{dON} + t_R$ ,  $t_{OFF} = t_{dOFF} + t_F$
  - Output discharge path is enabled during off.
  - By design; characterized, not production tested.

GLF  
INTEGRATED POWER

## APPLICATION INFORMATION

The GLF7130x family of devices are integrated 2.0 A, Ultra-Efficient I<sub>Q</sub>Smart™ Load Switch devices with a fixed slew rate control to limit the inrush current during turn on. Each device is capable of operating over a wide input range from 1.1 V to 5.5 V with very low on-resistance to reduce conduction loss. In the off state, these devices consume very low leakage current to avoid unwanted standby current and save limited input power. The package is a 0.77 mm x 0.77 mm x 0.46 mm wafer level chip scale package, saving space in compact applications. It is constructed using 4 bumps, with a 0.4 mm pitch for manufacturability.

### Input Capacitor

A capacitor is recommended to be placed close to the V<sub>IN</sub> pin to reduce the voltage drop on the input power rail caused by transient inrush current at start-up. A higher input capacitor value can be used to further attenuate the input voltage drop.

### Output Capacitor

An output capacitor is recommended to mitigate voltage undershoot on the output pin the moment when the switch is turned off. Undershoot can be caused by parasitic inductance from board traces or intentional load inductances. If load inductances do exist, use of an output capacitor can improve output voltage stability and system reliability. The C<sub>OUT</sub> capacitor should be placed close to the V<sub>OUT</sub> and GND pins.

### EN pin

The GLF71300 / GLF71301 / GLF71306 / GLF71308 can be activated by EN pin high level and the GLF71302 / GLF71303 by EN pin low level. Note that the EN pin has an internal pull-down resistor to help pull the main switch to a known “off state” when no EN signal is applied from an external controller.

### Output Discharge Function

The GLF71301 / GLF71303 / GLF71306 / GLF71308 has an internal discharge N-channel FET switch on the V<sub>OUT</sub> pin. When EN signal turns the main power FET to an off state, the N-channel switch turns on to discharge an output capacitor quickly.

### Board Layout

All traces should be as short as possible to minimize parasitic inductance effects. Wide traces for V<sub>IN</sub>, V<sub>OUT</sub>, and GND will help reduce voltage drops and parasitic effects during dynamic operation as well as improve the thermal performance at high load current.

| GLF71308 | WLCSP   | 4    | 4000 | 180                | 9             | 0.85 | 0.85 | 0.59 | 4 | 8 | Q1   |

Remark:

A0: Dimension designed to accommodate the component width

B0: Dimension designed to accommodate the component length

C0: Dimension designed to accommodate the component thickness

W: Overall width of the carrier tape

P: Pitch between successive cavity centers

## SPECIFICATION DEFINITIONS

| Document Type             | Meaning                                                                                                                                                                                                                                                                                                                                                                                                   | Product Status       |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| Target Specification      | This is a target specification intended to support exploration and discussion of critical needs for a proposed or target device. Spec limits including typical, minimum, and maximum values are desired, or target, limits. GLF reserves the right to change limits at any time without warning or notification. A target specification in no way guarantees future production of the device in question. | Design / Development |
| Preliminary Specification | This is a draft version of a product specification. The specification is still under internal review and subject to change. GLF reserves the right to change the specification at any time without warning or notification. A preliminary specification in no way guarantees future production of the device in question.                                                                                 | Qualification        |
| Product Specification     | This document represents the anticipated production performance characteristics of the device.                                                                                                                                                                                                                                                                                                            | Production           |

## DISCLAIMERS

Information in this document is believed to be accurate and reliable, however GLF assumes no liability for errors or omissions. Device performance may be impacted by testing methods and application use cases. Users are responsible to independently evaluate the applicability, usability, and suitability of GLF devices in their application. In no case will GLF be liable for incidental, indirect, or consequential damages associated with the use, mis-use, or sale of its product. Customers are wholly responsible to assure GLF devices meet their system level and end product requirements. GLF retains the right to change the information provided in this data sheet without notice.
