

DESCRIPTION

The GLF7130x is an ultra-efficiency, 2.0 A rated, Load Switch with integrated slew rate control. The best in class efficiency makes it an ideal choice for use in IoT, mobile, and wearable electronics.

The GLF7130x features an ultra-efficient I_QSmart™ technology that supports the lowest quiescent current (I_Q) and shutdown current (I_{SD}) in the industry. Low I_Q and I_{SD} solutions help designers to reduce parasitic leakage current, improve system efficiency, and increase battery lifetime.

The GLF7130x integrated slew rate control can also enhance system reliability by mitigating bus voltage swings during switching events. Where uncontrolled switches can generate high inrush currents that result in voltage droop and/or bus reset events, the GLF slew rate control specifically limits inrush current during turn-on to minimize voltage droop.

The GLF7130x Load Switch device supports an industry leading wide input voltage range and helps to improve operating life and system robustness. Furthermore, one device can be used in multiple voltage rail applications which helps to simplify inventory management and reduces operating cost.

The GLF7130x Load Switch device is small utilizing a wafer level chip scale package with 4 bumps in a 0.77 mm x 0.77 mm x 0.46 mm die size and a 0.4 mm bump pitch.

FEATURES

- Ultra-Low I_Q:
1 nA Typ @ 5.5 V_{IN} on GLF71300, GLF71301
540 nA Typ @ 5.5 V_{IN} on GLF71302, GLF71303
- Ultra-Low I_{SD}: 19 nA Typ @ 5.5 V_{IN}
- Low R_{ON} = 34 mΩ Typ. @ 5.5 V_{IN}
- I_{OUT} Max = 2.0 A
- Wide Input Range: 1.1 V to 5.5 V
6 Vabs max
- Controlled Rise Time: 430 us at 3.3 V_{IN}
- Internal EN Pull-Down Resistor on GLF71300 and GLF71301
- Internal EN Pull-Up Resistor on GLF71302 and GLF71303
- Integrated Output Discharge Switch:
GLF71301 and GLF71303
- Ultra-Small: 0.77 mm x 0.77 mm

APPLICATIONS

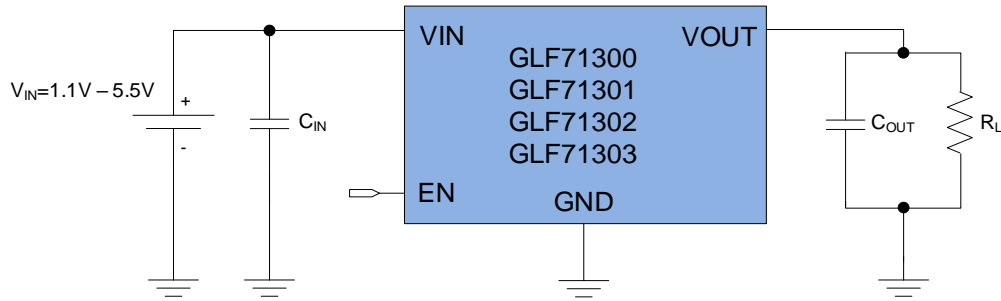

- Wearables
- Data Storage, SSD
- Mobile Devices
- Low Power Subsystems

PACKAGE

0.77 mm x 0.77 mm x 0.46 mm WLCSP

PIN CONFIGURATION

PIN DEFINITION

Pin #	Name	Description
A1	V _{OUT}	Switch Output
A2	V _{IN}	Switch Input. Supply Voltage for IC
B1	GND	Ground
B2	EN	Enable to control the switch (The EN pin has an internal pull-down resistor for GLF71300 and GLF71301 and pull-up for GLF71302 and GLF71303)

Figure 2. 0.77 mm x 0.77 mm x 0.46 mm WLCSP

ABSOLUTE MAXIMUM RATINGS

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions; extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Min.	Max.	Unit
V _{IN} , V _{OUT} , V _{EN}	Each Pin Voltage Range to GND	-0.3	6	V
I _{OUT}	Maximum Continuous Switch Current		2	A
P _D	Power Dissipation at T _A = 25 °C		1	W
T _{STG}	Storage Junction Temperature	-65	150	°C
T _A	Operating Temperature Range	-40	85	°C
θ _{JA}	Thermal Resistance, Junction to Ambient (board dependent)		110	°C/W

APPLICATION INFORMATION

The GLF7130x family of devices are integrated 2.0 A, Ultra-Efficient I_QSmart™ LoadSwitch devices with a fixed slew rate control to limit the inrush current during turn on. Each device is capable of operating over a wide input range from 1.1 V to 5.5 V with very low on-resistance to reduce conduction loss. In the off state, these devices consume very low leakage current to avoid unwanted standby current and save limited input power. The package is a 0.77 mm x 0.77 mm x 0.46 mm wafer level chip scale package, saving space in compact applications. It is constructed using 4 bumps, with a 0.4 mm pitch for manufacturability.

Input Capacitor

A capacitor is recommended to be placed close to the V_{IN} pin to reduce the voltage drop on the input power rail caused by transient inrush current at start-up. A higher input capacitor value can be used to further attenuate the input voltage drop.

Output Capacitor

An output capacitor is recommended to mitigate voltage undershoot on the output pin the moment when the switch is turned off. Undershoot can be caused by parasitic inductance from board traces or intentional load inductances. If load inductances do exist, use of an output capacitor can improve output voltage stability and system reliability. The C_{OUT} capacitor should be placed close to the V_{OUT} and GND pins.

EN pin

The GLF71300 / GLF71301 can be activated by EN pin high level and the GLF71302 / GLF71303 by EN pin low level. Note that the EN pin has an internal pull-down resistor to help pull the main switch to a known “off state” when no EN signal is applied from an external controller.

Output Discharge Function

The GLF71301 / GLF71303 has an internal discharge N-channel FET switch on the V_{OUT} pin. When EN signal turns the main power FET to an off state, the N-channel switch turns on to discharge an output capacitor quickly.

Board Layout

All traces should be as short as possible to minimize parasitic inductance effects. Wide traces for V_{IN}, V_{OUT}, and GND will help reduce voltage drops and parasitic effects during dynamic operation as well as improve the thermal performance at high load current.

SPECIFICATION DEFINITIONS

Document Type	Meaning	Product Status
Target Specification	This is a target specification intended to support exploration and discussion of critical needs for a proposed or target device. Spec limits including typical, minimum, and maximum values are desired, or target, limits. GLF reserves the right to change limits at any time without warning or notification. A target specification in no way guarantees future production of the device in question.	Design / Development
Preliminary Specification	This is a draft version of a product specification. The specification is still under internal review and subject to change. GLF reserves the right to change the specification at any time without warning or notification. A preliminary specification in no way guarantees future production of the device in question.	Qualification
Product Specification	This document represents the anticipated production performance characteristics of the device.	Production

DISCLAIMERS

Information in this document is believed to be accurate and reliable, however GLF assumes no liability for errors or omissions. Device performance may be impacted by testing methods and application use cases. Users are responsible to independently evaluate the applicability, usability, and suitability of GLF devices in their application. In no case will GLF be liable for incidental, indirect, or consequential damages associated with the use, mis-use, or sale of its product. Customers are wholly responsible to assure GLF devices meet their system level and end product requirements. GLF retains the right to change the information provided in this data sheet without notice.
